

Carnarvon Tracking Station – view from the 9 metre USB antenna

Carnarvon station map, with the yellow indicating the field of view of the panorama.

This view of the NASA Carnarvon Tracking Station has been assembled from photos taken by an unknown photographer (possibly with the Department of Supply) standing on the 9 metre USB antenna.

The photo was taken on **Tuesday 3rd May 1966**.

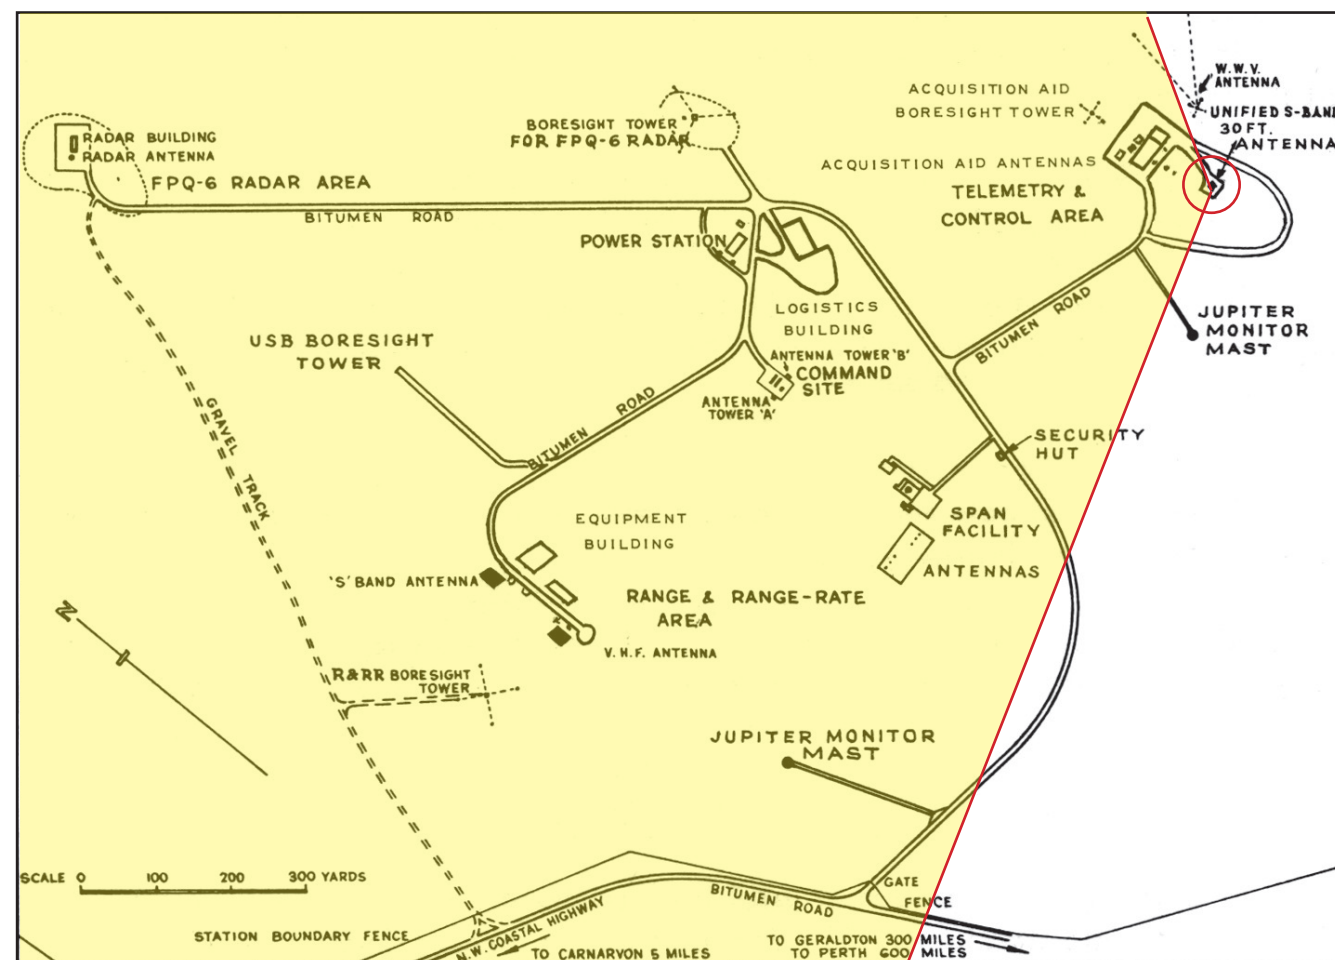

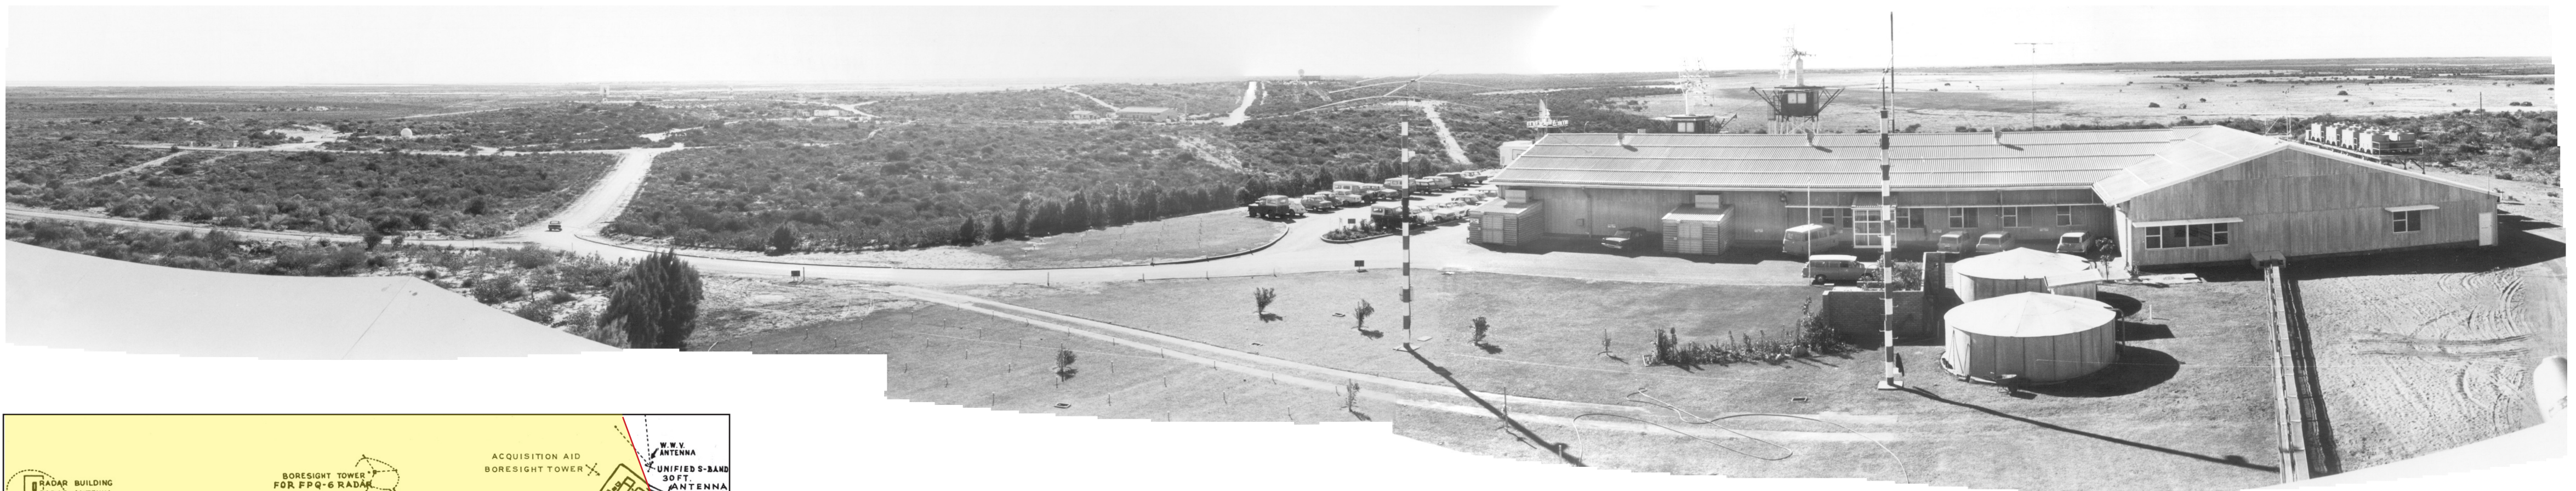

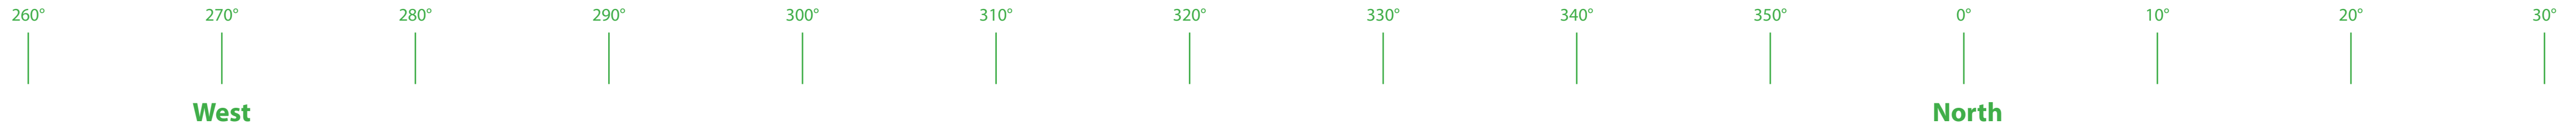

This picture gives a good idea of the size of the tracking station – the largest outside the US.

Not visible in this panorama are the two tropospheric scatter antennae providing the link to Geraldton – they are behind the cameraman. The eastern Jupiter Monitor antenna is just out of field to the left of the panorama, and the WWV antenna is just out of field to the right.

Thanks to Trevor Mosel and Stuart Wattison for the photos and scans and to Paul Dench and Terry Kierans for their help.
